

## Vidir Gislason's version of an Oil / Air Separator

Hi Steve,

Thanks for your excellent web. If you would care to show in the "woe and intrigue" section, this is my version of the "Baby bottle" mod. It has saved me many hours of cleaning the belly of my Cub. The box is all aluminum and fastened to the baffling. The valve is 3/8" ball type. Rubber hoses are used to connect the engine to the box and the box to the aluminum breather tube.

Vidir Gislason, Akureyri, Iceland
