

Vidir Gislason's version of a Bungee Tool!

Maybe you would be interested in another version of homemade bungee installation tool. When trying to install them the first time, I almost killed myself and also damaged the bungees. So I decided to make a tool that would be simple and safe to use, ensuring no damage to the bungees. It's made up of two car jacks with "lips" welded to seat the bungees. Two jacks ensure even stretching from both sides. When stretched enough, the bungies usually slip without help onto the hydrasorb unit. I got the material from the junkyard, labour was about two hours and headscratching was about an hour. Hope this helps someone. Regards Vidir Gislason
